

Join the DigiPLACE Community of Stakeholders and actively contribute to the building of the European Digital Platform for the construction ecosystem

What: The European initiative Digitizing European Industry (DEI), and the new EC initiative Digital Europe, considers it a top priority to create a European industrial data, IoT and AI ecosystem that, with other actions, will support the development of strong European digital industrial platforms to strengthen the competitiveness of European industry and SMEs in Europe and globally. 300 million euros of H2020 budget is being invested to finance a first wave of pilot initiatives of European industrial digital platforms for the sectors of industry, agriculture, health, energy, to which the construction industry has been added.

DigiPLACE is the European H2020 project that is responsible for designing the reference architecture of the European digital platform for constructions, that will support the digital transformation of the construction sector to make it more productive, sustainable and people-centric, able to respond to the growing demand for new services, technologies and business models necessary for the sector to grow and fulfill the 2030 and 2050 climate and energy goals.

The DigiPLACE project consortium, coordinated by Politecnico di Milano, has a partnership composed of the main European industry federations of the construction chain, top European universities and research centers, top ICT companies and associations, and the ministries of transport and infrastructure of France, Germany and Italy as the public procurement dimension is of great importance for the sector. Watch a short video about DigiPLACE here <https://youtu.be/Dymw4S3aPfE>

Why: Such a strategic endeavor cannot be reached without an open and inclusive approach that assures an active and wide involvement of all interested parties in the project activities. The future European Digital Platform for Construction, to be successful, needs to respond to the needs of all users.

That is why DigiPLACE has started to create an open and inclusive Community of Stakeholders (CoS), that will be composed of at least 1000 members from all over Europe, that will accompany the project during his 18 months duration, and will continue to exist also after the project completion in March 2021.

How: The DigiPLACE CoS wants to be the place where all parties that are interested in the competitiveness and digital upkeep of the European construction chain, will meet and contribute to the project via different means and actions.

First register on line for the DigiPLACE CoS, select the area of activity that best fits your profile (Policy makers, Educational institutions, Designers, Contractors, Owners, Public clients, Private clients, Operators, Individuals, Software developers, Value-adding resellers, Industry associations, Communities of practices, Technology advocates, Construction product manufacturers, Others), decide what level of engagement you want to have with the project by selecting the type of information you want to receive. Add a brief description of your activity. Once registered, as a member of the CoS you will be a) regularly **informed** about project objectives, activities and findings, sector relevant events and initiatives in Europe b) if you choose so you will be directly **engaged** via online questionnaires, c) **invited** to take part in closed doors workshops and physical and on line public events.

You will have the opportunity to be heard and your inputs valued.

If you join you become

- 1) You'll be Involved in the European communication and dissemination actions of the projects contents, activities and results
- 2) You'll be informed and invited to the national activities and events promoted by DigiPLACE.
- 3) You'll be given the opportunity to insert a brief description of your area of activity and expertise and your best practices in the area of construction digitization; once selected by the project, with your consent, your best practice will be shared with the community and included in the best practice collection of DigiPLACE.
- 4) Within your network, you will contribute to inform and influence the local, national and European institutions, creating the necessary support to implement the projects results and policy roadmap, and promote a faster digitization of the sector.
